

# Number of women to lose their unborn child after having the Covid Vaccine increases by 366% in just six weeks

BY THE DAILY EXPOSE ON MARCH 21, 2021 • ( 46 COMMENTS )

Listen Now

**Losing a new born is a heart breaking endeavour, as is the pain of losing an unborn child. Which is why we're both saddened and shocked to bring you the latest update on the number of unborn and newborn children to lose their lives as a result of the mothers receiving one of the Covid-19 vaccines in the United Kingdom.**

The Government have released weekly reports on adverse reactions to the experimental Covid-19 vaccines, the first of which covered data inputted to the MHRA Yellow Card Scheme from the 9th December 2020 through to the 24th January 2021. Their latest report ([find it here](#)), which is the seventh to be released covers data inputted to the MHRA Yellow Card Scheme from the 9th December 2020 though to the 7th March 2021.

Just six weeks separate the first and seventh report, and the shocking increase in the number of women losing their unborn and newborn child in that time due to having either the Pfizer or AstraZeneca Covid vaccine is appalling.

This was the Governments own advice upon emergency approval of the Pfizer / BioNTech vaccine –

## **'Pregnancy'**

*There are no or limited amount of data from the use of COVID-19 mRNA Vaccine BNT162b2.*

*Animal reproductive toxicity studies **have not been completed**. COVID-19 mRNA Vaccine **BNT162b2 is not recommended during pregnancy**.*

*For women of childbearing age, pregnancy should be excluded before vaccination. In addition, women of childbearing age should be advised to **avoid pregnancy for at least 2 months after their second dose**.*

We told you about [this back in December](#), as the Governments own advice also included comments on breast-feeding and fertility which were as follows –

## **Breast-feeding**

*It is unknown whether COVID-19 mRNA Vaccine BNT162b2 is excreted in human milk. A risk to the newborns/infants cannot be excluded. COVID-19 mRNA Vaccine BNT162b2 should not be used during breast-feeding.*

## **Fertility**

*It is **unknown** whether COVID-19 mRNA Vaccine BNT162b2 has an **impact on fertility**.'*

It is because of this advice released by the UK Government that we were so shocked to see in the first released report of adverse reactions to the Covid vaccines, using data inputted to the MHRA Yellow Card Scheme up to the 24th January 2021 a total of 4 women had suffered a miscarriage as a result of having the Pfizer/BioNTech vaccine.

## Case Series Drug Analysis Print

### Name: COVID-19 mRNA Pfizer- BioNTech vaccine analysis print analysis print

Report Run Date: 31-Jan-2021

Data Lock Date: 28-Jan-2021 19:00:04

Earliest Reaction Date: 19-Jan-2001

MedDRA Version: MedDRA 23.1

Reaction Name	Total	Fatal
<b>Pregnancy conditions</b>		
<i>Abortions spontaneous</i>		
Abortion spontaneous	4	0
<b>Pregnancy conditions SOC TOTAL</b>	<b>8</b>	<b>0</b>

As well as a total of 2 women losing their unborn child as result of having the Oxford/AstraZeneca vaccine.

MedDRA Version: MedDRA 23.1

Reaction Name	Total	Fatal
<b>Pregnancy conditions</b>		
<i>Abortions spontaneous</i>		
Abortion spontaneous	2	0
<b>Pregnancy conditions SOC TOTAL</b>	<b>6</b>	

We're still unable to answer why these women were given one of the Covid vaccines against the Governments own advice. But what's truly shocking is how much this number has increased in the 6 weeks that have unfolded since.

According to the seventh report released by the UK Government on adverse reactions to the Covid vaccines, using data inputted to the MHRA Yellow Card Scheme up to the 7th March 2021, there has been a 475% increase since the 24th January in the number of women who have lost their unborn child after having the Pfizer vaccine, bringing the total to 23. This is devastating.

Sadly there is also now 1 report of a premature baby sadly dying after the mother had the Pfizer vaccine.

## Case Series Drug Analysis Print

### Name: COVID-19 mRNA Pfizer- BioNTech vaccine analysis print

Report Run Date: 16-Mar-2021

Data Lock Date: 07-Mar-2021 19:00:03

Earliest Reaction Date: 03-Apr-1990

MedDRA Version: MedDRA 23.1

Reaction Name	Total	Fatal
<b>Pregnancy conditions</b>		
<i>Abortions spontaneous</i>		
Abortion spontaneous	23	0
<i>Gestational age and weight conditions</i>		
Premature baby	1	1

The AstraZeneca jab has also caused unnecessary pain to expectant mothers. As of the 7th March there has been a 150% increase since the 24th January in the number of women to suffer a miscarriage, bringing the total to 5.

Tragically there has also been 1 still birth reported to the MHRA Yellow Card Scheme after the mother had the AstraZeneca vaccine, but shockingly this has not been labelled as a fatality

<b>Pregnancy conditions</b>		
<i>Abortions spontaneous</i>		
Abortion spontaneous	5	0
<i>Stillbirth and foetal death</i>		
Stillbirth	1	0
<b>Pregnancy conditions SOC TOTAL</b>	<b>25</b>	<b>0</b>

The question is why are we seeing these numbers when the Governments own advice was that pregnant women should not have the vaccine?

Well we started digging and found that the [Government has since updated](#) it's original advice to the following –

#### 4.6 Fertility, pregnancy and lactation

##### **Pregnancy**

*There is limited experience with use of the COVID-19 mRNA Vaccine BNT162b2 in pregnant women. Animal studies do not indicate direct or indirect harmful effects with respect to pregnancy, embryo/foetal development, parturition or post-natal development. Administration of the COVID-19 mRNA Vaccine BNT162b2 in pregnancy **should only be considered** when the **potential benefits outweigh any potential risks for the mother and foetus.***

This is criminal! We dread to think what sort of numbers of these events we will see in the weeks to come.

Informed consent is important, we don't believe these women were informed in the slightest, and now they will have to suffer the eternal pain of losing their unborn or newborn child.
